KENALI BAHAYA SCAREWARE DAN  
KETAHUI CARA MENCEGAHNYA!

Speed & Service

Scareware merupakan perangkat lunak berbahaya yang digunakan untuk mengelabui pengguna internet melalui notifikasi atau pop-up ads. Bila notifikasi atau pop-up ads tersebut muncul, biasanya TemanKom akan ditawarkan program antivirus untuk dibeli ataupun diinstall.

Lantas bagaimana cara mencegah Scareware?

The infographic features a white background with a blue header bar. At the top right is the logo of the Ministry of Communications and Informatics of the Republic of Indonesia, which includes a shield with a map of Indonesia, a blue and red emblem, and a deer. Below the logo is a yellow rounded rectangle containing the question "Apa itu Scareware?". The main content is presented in a blue speech bubble with white text. It defines Scareware as a dangerous software that uses notifications or pop-up ads to trick internet users into buying or installing specific software. To the left of the text is a 3D-style character of a person wearing a white suit and a black mask, holding a laptop with a red padlock icon on its screen. A large red key is positioned next to the character. In the bottom right corner of the slide, there are three small images: a person in a lab coat working with equipment, an underwater scene with coral reefs, and a landscape with green hills and trees.

Apa itu Scareware?

Scareware adalah perangkat lunak berbahaya yang memanfaatkan notifikasi atau pop-up ads untuk mengelabui pengguna internet agar membeli atau menginstall perangkat lunak tertentu.

## CARA MENCEGAH SCAREWARE :

- 1. Jangan klik notifikasi yang mencurigakan**
- 2. Hentikan unduhan yang tidak disengaja**
- 3. Perbarui browser**
- 4. Gunakan pop up bloker**
- 5. Unduhlah software yang berasal  
dari sumber terpercaya**
- 6. Gunakan antivirus resmi**
